

Keep abortion out of pharmacies!

Walgreens, CVS, and Rite Aid have announced that they will dispense the abortion pill.

The FDA recently removed safety protocols for the abortion pill, ending the requirement for an in-person visit with a physician and allowing the abortion pill to be sold at pharmacies. Walgreens, CVS, and Rite Aid then announced their intention to go into the abortion business.

What you can do:

- Boycott Walgreens, CVS, and Rite Aid. Switch your prescriptions to a different pharmacy and shop elsewhere.
- Call Walgreens, CVS, and Rite Aid and let them know that you're boycotting them until they cut ties with the abortion industry.
- Spread the word! Post on social media and tell your friends.

The abortion pill regimen is approved by the FDA to **kill unborn babies up to 10 weeks of pregnancy.** (At 10 weeks, an unborn baby has a **beating heart, brain waves, fingers and toes, and sometimes gets hiccups.**) The first dose of the abortion pill regimen breaks down the lining of the uterus, destroying the baby's source of nutrients and oxygen. The second dose causes contractions to expel the baby's body. The mother then disposes of the body, usually **flushing the remains down the toilet.**

Pregnant and need help? Call or text: 1-800-712-4357
Had an abortion and regret it? Call or text: 1-866-721-7881
Took the first abortion pill and having second thoughts? Call: 1-877-558-0333
